

## **SIPTalk Security Policy**

Provided PC Range (ABN 56 101 821 407), trading as SIP Talk.

SIP Talk is strongly committed to protecting your privacy while interacting with our content, products and services.

We want to ensure that you can purchase with complete confidence online. We have taken every possible measure to give you absolute security and confidence in your dealings with us.

SIP Talk has a secure transaction environment for commerce on the Internet. Our online transaction system uses Secure Sockets Layer technology (SSL) to ensure your online shopping experience is safe, sound and secure at all times.

With the combination of siptalk.com.au's SSL 2048-bit encryption on our website and a secure browser at your end, you can be assured that your transaction details are encrypted. SSL locks all information passed from you to siptalk.com.au in an encrypted envelope. This makes it almost impossible to be intercepted by an unauthorised party, as long as your browser and local network support the use of encrypted data transmissions.

SIP Talk uses Godaddy SSL certificate to ensure the safety and security of your credit card transactions.

We do not store your banking details nor have any way to retrieve them once your transaction is complete.

## **Changes to our Security Policy**

From time to time we may decide to amend or update this Statement. When this occurs, we will post any changes on the website. We encourage you to periodically review this Statement so that you remain informed as to how we are ensuring your online transaction is safe and secure.

We welcome your questions and comments regarding this Statement. If you have any suggestions as to how we may improve our Security Statement, or if you are concerned about using your credit card online, you can contact us for more information or assistance.
